Rock RMS

Check in from the phone
already in their pocket

rockrms.com

Two Ways To Skip The Line

Both run on the Rock Mobile app and the check-in configuration you already have.

Tap Check-in

NFC tag at the door. Label prints over Wi-Fi.

1. **Tap.** Hold a phone to the tag at the door.
2. **Open.** The Rock Mobile app opens right at check-in.
3. **Print.** Pick who is checking in. Labels print over Wi-Fi.

- ✓ Families skip the line. Volunteers greet, not manage.
- ✓ See how often each tag is used and change where it points.

Beacon Check-in

Bluetooth beacons in the room. Nothing to tap.

1. **Broadcast.** A small beacon in the room sends out a Bluetooth signal.
2. **Wake.** The Rock Mobile app wakes up in the background when they arrive.
3. **Record.** Rock checks the person in and can check them out when they leave.

- ✓ Zero action from the attendee after a one-time opt in.
- ✓ Counts adults in the worship center, not only kids.

You will need

- **Rock Mobile app.** With check-in turned on.
- **NFC tags.** Inexpensive stickers. Add your link from any phone.
- **Your label printer.** The one check-in already uses.

You will need

Rock Mobile app. People allow location access and turn on Beacon Monitoring in the app once.

Bluetooth beacons. Small battery-powered devices. One or two cover a room.

One Rock setting. Turn on Proximity Check-in in your check-in configuration.

Ready to try it?

Setup guides for both options live in the Rock docs.
